Here the code is given below. You have to identify the problem in the code.

```
while( (i < 10) && (i > 24))
```

Answer ( Please select your correct option )

VuAnswers.com

the logical operator && cannot be used in a test condition

the while loop is an exit-condition loop

the test condition is always true

the test condition is always false

Made by: Waqar Siddhu

Which one of the statements given below is equivalent to `sum += j*j` ?

Answer ( Please select your correct option )

VuAnswers.com

`sum = j * j`

`sum = sum + j`

`sum = sum + j * j`

correct

`sum * j = j`

Made by: Waqar Siddhu

All elements of an array must be of \_\_\_\_\_.

Answer ( Please select your correct option )

VuAnswers.com

different data type

float data types only

character data types only

same data type

correct

Made by: Waqar Siddhu

In C/C++, null character is represented as \_\_\_\_\_.

American National Standards Institute

correct

**Made by: Waqar Siddhu**

In the member initializer list, the data members are initialized \_\_\_\_\_.

Answer ( Please select your correct option )

From left to right

From right to left

In the order in which they are defined within class

correct

There is no order for initialization

**Made by: Waqar Siddhu**

The initializer list is used to initialize the contained objects of a class at \_\_\_\_\_.

Answer ( Please select your correct option )

Run time

Debugging time

Construction time

Compile time

correct

**Made by: Waqar Siddhu**

When an object of a class is defined inside an other class then \_\_\_\_\_.

Answer ( Please select your correct option )

Constructor of enclosing class will be called first

correct

Constructor of inner object will be called first

Constructor and Destructor will be called simultaneously

Only destructor will be called

**Made by: Waqar Siddhu**

A constructor will create a new object with a full copy of the other object, this type of copy is known as \_\_\_\_\_.

Answer ( Please select your correct option )

Deep copy

correct

Shallow copy

Constructor copy

Object copy

**Made by: Waqar Siddhu**

When we define an array of objects then \_\_\_\_\_.

Answer ( Please select your correct option )

Destructor will be called once for the whole array

Destructor will be called for each object of the array

correct

No Destructor will be called

Destructor for only first object in the array will be called

**Made by: Waqar Siddhu**

Which of the following function is used to increase the size of already allocated memory chunk?

Answer ( Please select your correct option )

malloc

calloc

realloc

correct

free

**Made by: Waqar Siddhu**

NULL value has been defined in \_\_\_\_\_ and \_\_\_\_\_ header files.

Answer ( Please select your correct option )

strings.h , iostream.h

ctype.h , conio.c

conio.c , conio.h

stdlib.h , stddef.h

correct

**Made by: Waqar Siddhu**

Which of the following function call is correct for the function prototype?

`defaultParameters ( int a, int b = 7, char z = '*' );`

Answer ( Please select your correct option )

`defaultParameters (5);`

correct

`defaultParameters (5, '8');`

`defaultParameters (6, '#');`

`defaultParameters (0, 0, '*', 0);`

**Made by: Waqar Siddhu**

Friend function of a class is \_\_\_\_\_.

Answer ( Please select your correct option )

Private function

Non-member function

correct

Public function

Member function

**Made by: Waqar Siddhu**

The declarator of Plus (+) member operator function is \_\_\_\_\_.

Answer ( Please select your correct option )

Class-Name operator + (Class-Name rhs)

operator Class-Name + ( )

operator Class-Name + ( rhs)

Class-Name operator + ( )

**Made by: Waqar Siddhu**

The operator function will be implemented as \_\_\_\_\_, if obj1 drive the - operator whereas obj2 is passed as arguments to - operator in the statement given below.  
obj3 = obj1 - obj2;

Answer ( Please select your correct option )

Friend function

Virtual Function

Member function

correct

Non-member function

**Made by: Waqar Siddhu**

Consider the following code segment

```
class M {  
    friend int operator!(const M &);  
    ...  
};
```

Answer ( Please select your correct option )

Member function

Non-member function

Binary operator function

Friend Function

**Made by: Waqar Siddhu**

When the compiler overloads the assignment (=) operator by default then \_\_\_\_\_.

Answer ( Please select your correct option )

compiler does not allow default overload of assignment (=) operator

member of the class are not assigned properly

Compiler does assignment of some selected members

compiler does member wise assignment.

**Made by: Waqar Siddhu**

Correct syntax of function prototype for overloading new operator is \_\_\_\_\_.

Answer ( Please select your correct option )

void\* new operator(size\_t size)

void\* new(size\_t size)

operator new(size\_t size)

void\* operator new(size\_t size)

correct

**Made by: Waqar Siddhu**

There is a pointer variable named *ptr* of type float then address of which type of variable the *ptr* will store in it?

Answer ( Please select your correct option )

int

correct

float

char

double

Made by: Waqar Siddhu

Which one is the correct syntax for defining an identifier PI with preprocessor directive?

Answer ( Please select your correct option )

#undef PI 3.1415926

#define PI 3.1415926

correct

#define PI = 3.1415926

#ifdef PI = 3.1415926

**Made by: Waqar Siddhu**

Whenever we allocate any memory from the \_\_\_\_\_ then starting position of the block of the memory allocated is returned as an address that is kept in a pointer.

Answer ( Please select your correct option )

Flush

Buffer

Heap

correct

Stack

**Made by: Waqar Siddhu**

Question No : 1 of 52 Marks: 1 (Budgeted Time 1 Min)

A \_\_\_\_\_ statement specifies that an action is to be repeated while some condition remains true.

Answer ( Please select your correct option )

The appropriate data type to store the number of rows and columns of the matrix is \_\_\_\_\_.

Answer ( Please select your correct option )

float

strings

int

correct

char

**Made by: Waqar Siddhu**

The operator function will be implemented as \_\_\_\_\_, if both objects (obj1, obj2) are passed as arguments to - operator in the statement given below.  
obj3 = obj1 - obj2;

Answer ( Please select your correct option )

friend function

member function

correct

non-member function

either non-member or friend function

Made by: Waqar Siddhu

By using objects as class members, \_\_\_\_\_ is achieved.

Answer ( Please select your correct option )

Accessibility

Reliability

Reusability

correct

Usability

**Made by: Waqar Siddhu**

In the member initializer list, the data members are initialized \_\_\_\_\_.

Answer ( Please select your correct option )

From left to right

From right to left

In the order in which they are defined within class

**correct**

There is no order for initialization

**Made by: Waqar Siddhu**

\_\_\_\_\_ data members of a contained object can be accessed from inside of the containing class.

Answer ( Please select your correct option )

Private

correct

Public

Protected

All

Made by: Waqar Siddhu

The statement `cin.get ()`; is used to \_\_\_\_\_.

Answer ( Please select your correct option )

Read a string from keyboard

Read a character from keyboard

correct

Read a string from file

Read a character from file

**Made by: Waqar Siddhu**

When an object of a class is defined inside an other class then \_\_\_\_\_.

Answer ( Please select your correct option )

Constructor of enclosing class will be called first

correct

Constructor of inner object will be called first

Constructor and Destructor will be called simultaneously

Only destructor will be called

**Made by: Waqar Siddhu**

The order of destruction of an object is \_\_\_\_\_.

Answer ( Please select your correct option )

same as the construction order.

reverse as the construction order.

correct

independent of the construction order.

same as the order of objects declared.

**Made by: Waqar Siddhu**

When we define an array of objects then \_\_\_\_\_.

Answer ( Please select your correct option )

Destructor will be called once for the whole array

Destructor will be called for each object of the array

**correct**

No Destructor will be called

Destructor for only first object in the array will be called

**Made by: Waqar Siddhu**

At the time of linking, library functions are available in the \_\_\_\_\_ form.

Answer ( Please select your correct option )

compiled

text

correct

runnable

code

**Made by: Waqar Siddhu**

If we define an identifier with the statement #define PI 3.1415926 then during the execution of the program, the value of PI \_\_\_\_\_.

Answer ( Please select your correct option )

can not be replaced

can be changed by using function

remains constant

correct

can be changed by some operation

**Made by: Waqar Siddhu**

The functions used for dynamic memory allocation return pointer of type \_\_\_\_\_.

Answer ( Please select your correct option )

int

float

double

void

correct

**Made by: Waqar Siddhu**

Which of the following is a valid class declaration?

Answer ( Please select your correct option )

class B { }

public class A { }

object A { int x; };

class A { int x; };

correct

**Made by: Waqar Siddhu**

If constructor contains a return statement in its body then compiler will give \_\_\_\_\_.

Answer ( Please select your correct option )

No error

Syntax error

correct

Logical error

Run time error

**Made by: Waqar Siddhu**

Which one of the given options is correct prototype syntax for overloaded operator?

Answer ( Please select your correct option )

return-type operator-symbol (parameter-list) operator;

operator return-type operator-symbol (parameter-list);

return-type operator operator-symbol (parameter-list);

return-type operator-symbol operator (parameter-list);

**Made by: Waqar Siddhu**

The following prototype of unary operator function indicates that it is \_\_\_\_\_.  
Date operator++(int )

Answer ( Please select your correct option )

Member functions of post increment operator

Member functions of pre increment operator

correct

Non-member functions of post increment operator

Non-member functions of pre increment operator

**Made by: Waqar Siddhu**

Consider the following code segment.

```
class M {  
public:  
    M &operator+(const M &);  
    ...  
};
```

Answer ( Please select your correct option )

Member function

Non-member function

Friend function

Virtual function

**Made by: Waqar Siddhu**

Consider the following code segment

```
class M {  
    friend int operator!(const M &);  
    ...  
};
```

Answer ( Please select your correct option )

Member function

Non-member function

Binary operator function

Friend Function

**Made by: Waqar Siddhu**

When we define an array of objects then \_\_\_\_\_.

Answer ( Please select your correct option )

Constructor will be called once for whole array

Constructor will be called for each object of the array

correct

Constructor will never call

Depends on the size of array

**Made by: Waqar Siddhu**

While overloading new and delete operators, we should take care that \_\_\_\_\_.

Answer ( Please select your correct option )

They should be overloaded for specific types instead of overloading globally.

Both of these operators should not be overloaded in the same program.

We should never overload either of these operators.

They should be not overloaded for specific types instead of overloading globally.

**Made by: Waqar Siddhu**

When the logical operator AND (&&) combines two expressions exp1 and exp2 then the result will be true only \_\_\_\_\_

Answer ( Please select your correct option )

When both exp1 and exp2 are true

When both exp1 and exp2 are false

When exp1 is true and exp2 is false

When exp1 is false and exp2 is true

**Made by: Waqar Siddhu**

In top down \_\_\_\_\_ programming a problem is broken into small pieces or modules and each small piece corresponds to a function.

Answer ( Please select your correct option )

Object Oriented

Structured

Assembly

High level

**Made by: Waqar Siddhu**
