VuAnswers.com

Answer ([Please click here to Add Answer](#))

Made by: Waqar Siddhu

Suppose you are working on a project. You are required to make projections which are perpendicular or parallel to the view plane. What type of projection you will use for it and what are the types of this projection?

VuAnswers.com

Answer ([Please click here to Add Answer](#))

Made by: Waqar Siddhu

Why do we use curves? What are the advantages of using curves?

VuAnswers.com

Answer ([Please click here to Add Answer](#))

Made by: Waqar Siddhu

$$x_1 = d_x$$

$$x_2 = \frac{1}{27}a_x + \frac{1}{9}b_x + \frac{1}{3}c_x + d_x$$

$$x_3 = \frac{8}{27}a_x + \frac{4}{9}b_x + \frac{2}{3}c_x + d_x$$

VuAnswers.com

Answer ([Please click here to Add Answer](#))

Normal Arial 12 B I U

Made by: Waqar Siddhu

$$x_2 = \frac{1}{27}a_x + \frac{1}{9}b_x + \frac{1}{3}c_x + d_x$$

$$x_3 = \frac{8}{27}a_x + \frac{4}{9}b_x + \frac{2}{3}c_x + d_x$$

$$x_4 = a_x + b_x + c_x + d_x$$

By using given data find the values of a_x, b_x, c_x & d_x ?

VuAnswers.com

Answer ([Please click here to Add Answer](#))

Made by: Waqar Siddhu

Given are the points that lie on a plane P1,

P1<2.0,3.0,4.0>

P2<1.0,5.0,4.0>

P3<7.0,6.0,2.0>

VuAnswers.com

Answer ([Please click here to Add Answer](#))

Normal Arial 12 B I U

Made by: Waqar Siddhu

P1<2.0,3.0,4.0>
P2<1.0,5.0,4.0>
P3<7.0,6.0,2.0>

You are required to find the equation of a normal to the plane P1.

VuAnswers.com

Answer ([Please click here to Add Answer](#))

Made by: Waqar Siddhu

What is meant by T-intersection in a polygonal model of surface?

Answer ([Please click here to Add Answer](#))

VuAnswers.com

Normal

there's no guarantee that the line segments AB and BC lie on exactly the same pixels as the segment AC. Sometimes they do, and sometimes they don't, depending on the transformations and orientation. This can cause cracks to appear intermittently in the surface.

Figure 1 : Modifying an Undesirable T-intersection

Made by: Waqar Siddhu

Name the OpenGL function for viewing transformation through camera?

Answer ([Please click here to Add Answer](#))

VuAnswers.com

The transformation process to produce the desired scene for viewing is analogous to taking a photograph with a camera

Made by: Waqar Siddhu

In 3D computer graphics, how can we find the unit vector?

Answer ([Please click here to Add Answer](#))

VuAnswers.com

Unit Vector

Often in 3D computer graphics you need to convert a vector to a unit vector, ie a vector that points in the same direction but has a length of 1.

This is done by simply dividing each component by the length:

Made by: Waqar Siddhu

Given the vector $V (3,2,1)$, you are required to find the projection of the vector V on the xz plane.

Answer ([Please click here to Add Answer](#))

VuAnswers.com

Projection of v onto the xz plane

Made by: Waqar Siddhu

Explain critical angle in refraction of light?

Answer ([Please click here to Add Answer](#))

VuAnswers.com

If we use Snell's law for light going from water to air, and plug in 90° for therefracted angle, we get 41.8° for the incident angle. This is called the critical angle atwhich we observe the phenomenon of total internal reflection. At any angle greater thanthis, light will not pass though a boundary but will be reflected internally.

Made by: Waqar Siddhu

Write down the simplified third degree equation of Bezier Curve?

Answer ([Please click here to Add Answer](#))

VuAnswers.com

Bezier curves of any degree. In fact the degree of a Bezier curve is equal to $n-1$, where n is the number of control points.

Made by: Waqar Siddhu

Write down the three OpenGL routines for modeling transformations?

Answer ([Please click here to Add Answer](#))

VuAnswers.com

The three OpenGL routines for modeling transformations are `glTranslate*()`, `glRotate*()`, and `glScale*()`.

Made by: Waqar Siddhu

What are the diversities among the categories of polygons?

Answer ([Please click here to Add Answer](#))

VuAnswers.com

Made by: Waqar Siddhu

Explain Oren Nayar diffuse reflection? How it is different from Lambertian diffuse shading?

Answer ([Please click here to Add Answer](#))

VuAnswers.com

Oren—Nayar Diffuse Reflection

Though there's been a lot of research on specular reflection models, there's been less research on diffuse reflection models. One of the problems of the standard Lambertian model is that it considers the surface as a smooth diffuse surface. Surfaces that are really rough, like sandpaper, exhibit much more of a backscattering effect, particularly when the light source and the view direction are in the same direction.

The classic example of this is a full moon. If we look at the picture of the moon shown in **Figure 5**, it's pretty obvious that this doesn't follow the Lambertian distribution—if it did, the edges of the moon would be in near darkness. In fact, the edges look as bright as the center of the moon. This is because the moon's surface is rough—the surface is made of a jumble of dust and rock with diffuse reflecting surfaces at all angles—thus the quantity of reflecting surfaces is uniform no matter the orientation of the surface; hence no matter the orientation of the surface to the viewer, the amount of light reflecting off the surface is nearly the same.

Made by: Waqar Siddhu

Which type of light from parallel light, Point light and Spot light you would prefer in your lighting model, in the case,

- You have limited computation power
- You have no problem of computation power, but you have to make the scene as much realistic as possible.

Answer ([Please click here to Add Answer](#))

VuAnswers.com

Made by: Waqar Siddhu

Write the C program that is used to draw the RED color pixel on the 20th row and 20th column of the screen.

Answer ([Please click here to Add Answer](#))

VuAnswers.com

glutReshapeWindow

Made by: Waqar Siddhu

Give vector equation for a plane curve using second degree polynomial?

Answer (Please [click here](#) to Add Answer)

VuAnswers.com

$$P(u) = au^2 + bu + c$$

Made by: Waqar Siddhu

Write down the difference between one-dimensional and two-dimensional evaluator (only for what type of Bezier shape they are useful with)?

Answer (Please [click here](#) to Add Answer)

VuAnswers.com

In two dimensions, everything is similar to the one-dimensional case, except that all the commands must take two parameters, u and v , into account. Points, colors, normals, or texture coordinates must be supplied over a surface instead of a curve

Made by: Waqar Siddhu

How can we improve rendering efficiency?

Answer ([Please click here to Add Answer](#))

VuAnswers.com

To improve rendering efficiency when dynamically viewing a scene, more or less detailed versions of a model may be swapped in and out of the scene database depending on the importance (usually determined by image size) of the object in the current view.

Made by: Waqar Siddhu

Discuss the purpose of OpenGL?

Answer ([Please click here to Add Answer](#))

VuAnswers.com

As a software interface for graphics hardware, OpenGL renders multidimensional objects into a frame buffer. OpenGL is industry-standard graphics software with which programmers can create high-quality still and animated three-dimensional color images.

Made by: Waqar Siddhu

```
#define PI 3.14159265
#define EDGES 30
/* draw a circle */
glBegin(GL_LINE_STRIP);
for (i = 0; i <= EDGES; i++)
```

Answer ([Please click here to Add Answer](#))

VuAnswers.com

Made by: Waqar Siddhu

```
for (i = 0; i <= EDGES; i++)  
    glVertex2f(cos((2 *PI*i)/EDGES), sin((2 *PI*i)/EDGES));  
glEnd();
```

Correct this bad code for constructing a closed surface for two-dimensional example?

Answer ([Please click here to Add Answer](#))

VuAnswers.com

To correct the code, make sure that when $i == EDGES$, you use 0 for the sine and cosine, not $2*PI*EDGES/EDGES$. (Or simpler still, use `GL_LINE_LOOP` instead of `GL_LINE_STRIP`, and change the loop termination condition to $i < EDGES$.)

Made by: Waqar Siddhu

Write down the procedure to use one-dimensional evaluator?

Answer (Please [click here](#) to Add Answer)

VuAnswers.com

The one-dimensional target parameter specifies what the control points represent, and therefore how many values need to be supplied in points. The points can represent vertices, RGBA color data, normal vectors, or texture coordinates.

For example, with `GL_MAP1_COLOR_4`, the evaluator generates color data along a curve in four-dimensional (RGBA) color space.

Made by: Waqar Siddhu

How does the black and white pictures and color pictures are stored in frame buffer?

Answer (Please [click here](#) to Add Answer)

VuAnswers.com

The frame buffer stores information in a two dimensional matrix;

If there is black and white picture then there is only one bit required to store '0' for black or 1 for white and in this case buffer will be referred as **bitmap**.

In colour pictures obviously multiple bits are required for each pixel position depending on the possible number of colours in case if multiple bits are used for one pixel frame buffer will be referred as **pixmap**

Made by: Waqar Siddhu

Write down code for making window of size (400,600) and having OpenGL rendering context of rgb, depth and double buffer with window name "Exam Code Window"? (develop this window using OpenGL and glut library in C)

Answer ([Please click here to Add Answer](#))

VuAnswers.com

Made by: Waqar Siddhu

Explain how recursive subdivision function of triangle helps in improving the polygonal model of surface?

p 345 read

Answer (Please [click here](#) to Add Answer)

VuAnswers.com

When you subdivide a surface, watch out for any nontriangular polygons. The three vertices of a triangle are guaranteed to lie on a plane; any polygon with four or more vertices might not. Nonplanar polygons can be viewed from some orientation such that the edges cross each other, and OpenGL might not render such polygons correctly.

Made by: Waqar Siddhu

Which type of light from parallel light, Point light and Spot light you would prefer in your lighting model, in the case,

- You have limited computation power
- You have no problem of computation power, but you have to make the scene as much realistic as possible.

Made by: Waqar Siddhu

Consider the Digital Differential Analyzer (DDA) Algorithm for drawing a straight line. Two points P1(2,3) and P2(5,6) are given. You are required to run this algorithm for these points to draw a straight line. Also show the values of variables at each step.

DDA_Line (Point p1, Point p2)

$dx = p2.x - p1.x$

$dy = p2.y - p1.y$

Answer ([Please click here to Add Answer](#))

VuAnswers.com

Made by: Waqar Siddhu

```
dx = p2.x - p1.x  
dy = p2.y - p1.y  
x1 = p1.x  
y1 = p1.y  
if |dx| > |dy| then  
step = |dx|
```

Answer ([Please click here to Add Answer](#))

VuAnswers.com

Made by: Waqar Siddhu

```
if (dx < 0)
step = |dx|
else
step = |dy|
xIncrement = dx/step
yIncrement = dy/step
for counter = 1 to step
```

Answer ([Please click here to Add Answer](#))

VuAnswers.com

Made by: Waqar Siddhu

```
xIncrement = ax/step  
yIncrement = dy/step  
for counter = 1 to step  
drawPixel (x1, y1)  
x1 = x1 + xIncrement  
y1 = y1 + yIncrement
```
